

CLOTRIMAZOLE 1%

Topical cream

Pharmacological information:

CLOTRIMAZOLE 1% CREAM treats fungal infections of the skin, such as athlete's foot (tinea pedis), tinea cruris or inguinalis and tinea corporis.

Composition: Each gram contains:

Clotrimazole..... 10 mg
Excipients q.s.

Dose: It is recommended that the cream is rubbed on the affected area, 2 to 3 times a day until its complete absorption or according to medical prescription.

The duration of the treatment depends on the localization and extension of the process. In general, it is advised to use the cream as it follows: Dermatosis: 3 to 4 weeks. Erythrasma and pityriasis versicolor: 3 weeks.

Precautions: Clotrimazole should be used carefully on patients who have shown any hypersensitivity to other azole antimycotics, including miconazole, itraconazole or fluconazole. Patients with diabetes mellitus, under chemotherapy or who are immunosuppressed, should ask their physician before starting the treatment with clotrimazole. Inform your physician or pharmacist if you are using or have recently used other medicaments, even if they are medicinal plants or were acquired without a prescription.

Contraindications: Hypersensitivity to any of the components in the composition.

Secondary effects: It has been observed, although not frequently, that some reactions on the application area might occur, such as redness, stinging or burning, blisters, local pain or discomfort, peeling, itching, swelling and generalized exanthem.

Warnings: If you are pregnant or nursing, might be pregnant or are trying to get pregnant, ask your physician or pharmacist before using this medicament. During the first three months of pregnancy, the physician will evaluate the benefits of using the medicament before its administration.

Route of administration: Topical.

Presentation: Box with aluminum pipe with 5, 10, 15, 20, 25, 30, 60, 100 and 120 g.

Storage conditions:

Keep in a cool and dry place (below 30°C), protect from light.
Keep out of reach of children.
